*ANSWER:*

The eight dimensions of health, and how they can be maintained, are as follows:

1. Physical: eat nutritious food, exercise regularly, practice illness and accident prevention, and avoid harmful behaviors and substances.
2. Psychological: develop awareness and acceptance of feelings, express emotions appropriately, function independently, and develop coping mechanisms for stress.
3. Spiritual: identify basic purpose in life; learn how to experience love, joy, peace, and fulfillment; and practice devotion to others' needs.
4. Social: participate and contribute to community, live in harmony with others, develop positive interdependent relationships, and practice healthy sexual behaviors.
5. Intellectual: increase ability to think and learn from life experience, be open to new ideas, and increase capacity to question and evaluate all types of information.
6. Environmental: protect oneself from dangers in the air, water, and soil, as well as in products used.
7. Occupational and financial: in college, choose and prepare for a career consistent with your personal values and beliefs, ensure that after you leave college you are contributing your unique talents and skills to work that is rewarding, learn how to manage your money and safeguard your financial well-being.
8. Community: on campus, establish smoke-free areas, prohibit tobacco advertising and sponsorship of campus events, ensure safety at parties, and enforce alcohol laws and policies.

77. Explain how an individual's locus of control can affect his or her behavior and health.

*ANSWER:* If you believe that your actions will make a difference in your health, your locus of control is internal. If you believe that external forces or factors play a greater role, your locus of control is external. Hundreds of studies have compared people who have these different perceptions of control:

- "Internals," who believe that their actions largely determine what happens to them, act more independently, enjoy better health, are more optimistic about their future, and have lower mortality rates.
- "Externals," who perceive that chance or outside forces determine their fate, find it harder to cope with stress and feel increasingly helpless over time. When it comes to weight, for instance, they see themselves as destined to be fat.
